ergoxs.com

**ERGO
XS**

ErgoXS stands for functionality. Our products do what they are supposed to do, providing optimal support to the people using them during their work activities. Because our products are functional: during development, we think mainly about the people who will be using them.

The teacher, standing in front of the class using a digital whiteboard to explain. The entrepreneur who gives a pitch and wants to give a perfect presentation. The group of creative people who brainstorm new ideas with a touchscreen, whiteboards, etc. Solutions are the name of the game at ErgoXS. And we've been proving for years that they don't have to be complicated or expensive.

From floor solutions to wall solutions and from mobile trolleys to TV lifts. ErgoXS has a line of products to solve any problem, whether it's in the classroom or boardroom. Because what all our product users have in common is that they want to tell stories. And those stories come across best when the materials used work perfectly. Because the less hindrance there is from the equipment you're working with, the less it distracts from what really matters: the content.

We develop and manufacture standard and customised lift and mounting systems to mount touchscreens and screens to ceilings, walls and floors. We also have a range of freestanding and mobile versions. We design our systems with the end user in mind: safe, durable, functional and high quality.

Our products enable people to perform their tasks effectively. We prioritize functionality in our product development, considering the needs of the people who will be using them.

Whether it's floor solutions, wall solutions, mobile trolleys, or TV lifts, ErgoXS has a line of products to solve any problem. At ErgoXS, we want our customers to be more than just satisfied. The end users of our products are our main priority. Because what all our product users have in common is that they want to tell stories. And those stories come across best when the materials used work perfectly. Because the less hindrance there is from the equipment you're working with, the less it distracts from what really matters: the content.

By empathizing with the end users and understanding their various (work) situations, we provide effective solutions. Moreover, with our extensive experience, we pay attention to details that our customers may overlook. It's no coincidence that we are specialists in our field. We closely monitor technological developments and the changing needs of our customers, continuously innovate, and always welcome feedback. At ErgoXS, our focus is on providing solutions. And we have been demonstrating for years that they don't have to be complicated or expensive.

More moving better talking.

Craftsmanship, customisation and flexibility

At ErgoXS, we have a large number of standard systems in our range. But if a specific situation requires a customised solution, we deliver. We don't just design our products, we also manufacture them ourselves. 100% Dutch craftsmanship right here in our own factory in Tolbert.

Does a particular situation require specific customisation? We would be happy to consult with you to discuss the options. Because we're flexible and do what it takes to keep our customers happy. It makes us happy too, because that's part of trustworthy entrepreneurship. They're happy, we're happy.

Own product development

From design to assembly and from packing to contact with the outside world: everything is done here at the same location in Tolbert. Our factory and office are located right next to each other. This means the communication lines between our product developers and production employees are short, allowing us to respond quickly to dealers and customers. We work here with a team of more than 50 employees day in, day out with heart and soul on the most fantastic systems. Systems that are right, down to the very last detail: because we won't settle for less. New solutions are conceived, developed, built and tested until they are completely right and then released into the world.

Our dealer network

As a developer and manufacturer of lift systems, our products are only available through selected dealers, both nationally and internationally. These dealers are extremely important to us and are located all over the world. They're familiar with industry-specific requirements so they can brainstorm along with you to find the ideal lift system for your (work) situation. Need a customised lift system? The communication lines with our dealers are short. They're happy to help.

Durability and quality

A suspension system that can adjust a touchscreen to the right height with just one push of a button. A mobile stand that supports a screen and where you can neatly stow away all the cables. A television lift hidden away perfectly in a cabinet. Our high-quality products aren't just functional but also extremely durable, safe and handy to use. And of course we focus on the design as well, because we understand the importance of an attractive product.

We work closely with our materials and parts suppliers, because every component must meet strict criteria. We choose our materials with great care so you can enjoy using our products for decades to come. They're tough and durable and we produce them sustainably as much as possible. So choosing ErgoXS doesn't mean just choosing quality, it's also choosing sustainability.

Our promise, certification and service

A company's success has nothing to do with profit. It's about keeping promises. Our promise is to deliver high-quality mounting systems made by our own specialised craftsmen who are rewarded fairly for their dedication. And we develop and manufacture our systems with respect for our environment. That's what we stand for at ErgoXS.

We guarantee the quality of our products with, among other things, our ISO 9001 certification. The quality management system that we set up in accordance with this standard helps us keep our organisation healthy. This allows us to continuously improve both the process quality and the quality of our products and services.

Thanks to this system, it's clear to everyone what we do, how we do it and that we comply with the applicable laws and regulations. It also helps us to further develop our organisational policy, to motivate and train our employees, to increase our quality awareness, to maintain lasting relationships with dealers and to increase general customer satisfaction.

Warranty

Our systems are more than just your basic systems. We make them in our own factory with the utmost precision and export them internationally. Because we have full confidence in the quality, we provide our products with a generous 5-year Carry-in warranty.

Everytime
a perfect fit.

Our product lines

Systems for touchscreens, digital boards, televisions, single or dual screen, electronically or manually adjustable, portable, freestanding, for wall-mounting or ceiling-mounting: ErgoXS has it all. And to give you a good overview, we've divided them into the following four lines.

ErgoFrame

Our robust fixed and mobile ErgoFrame lift systems are suitable for a range of screen sizes and weights. They are electrically adjustable to the right height at the push of a button. The ErgoFrame lift systems are in most cases fully assembled and otherwise easy to assemble yourself.

Slimline

Our Slimline products are perfect for exports and tenders. We supply them in bulk as well as individually. They are cleverly packaged as DIY kits, ensuring low transportation costs. Moreover, we can deliver them in large quantities, with up to twenty units on a single pallet. The Slimline products support a wide range of VESA screen sizes. Whether you need just one product or a larger quantity, we can meet your specific requirements.

Homeline

Our Homeline is a little bit different. Even though the products are intended for wholesalers and furniture makers, we ultimately see them mainly in private homes. The systems are easy to operate and can be neatly tucked away: so you bring your television out when you need it and afterwards it disappears neatly out of sight again.

Flexline

Our Flexline range consists of high-quality and cleverly designed mounting systems. They're easy to mount on floors, walls and ceilings or are mobile. Flexline systems are carefully designed to integrate audiovisual components such as connection or control panels from various well-known brands. These can be easily installed at any desired height within the Flexline systems. This allows you to create an all-in-one solution for presentation configurations. The possibilities are endless!

Your message
always supported.

ErgoFrame

Thanks to our ErgoFrame line, working with a screen or touchscreen has never been easier. These robust lift systems are suitable for a range of screens, varying in size and weight, and you can bring them to the right height electrically with just a push of a button. Anyone can do it, because we've left no stone unturned when it comes to clarity.

Most of the ErgoFrame lift systems are fully assembled, but those that aren't are super easy to do yourself. The mobile lift systems in our range are equipped with large wheels, which make it easy to go over even somewhat higher thresholds. In addition to convenience, we've also thought of safety and clarity.

Nearly every ErgoFrame lift system is equipped with a Safety Stop, which stops the system automatically when it comes into contact with, for example, a table during height adjustment. We also left space in the frame of our lift systems for mounting and storage options for power strips, cables, etc. Everything is neatly stowed away and no distracting elements remain hanging under the screen.

Want to learn more about these products or, for example, delivery? Go to ergoxs.com or contact us directly at phone number +31 594 55 43 00. We'll be happy to help.

Available in three versions:
Master Lite, Master Select &
Master Supreme

Compatible with VESA
200 x 200 mm
to 800 x 400 mm

For screens up to
120 or 170 kilos

Expandable with useful
accessories to make the lift system
even more complete

Floor and wall installation

With an optionally available floor
plate, this stand can be placed
freestanding in a room

ErgoFrame Master

Wall floor lift where you can go either way

⬆️⬆️ Electrically adjustable height ⚙️ Available in grey

For accessories, see page 32.

A true master!

Master

A little higher or a little lower, for a slightly lighter screen or a really heavy one : you can't go wrong with the ErgoFrame Master.

This electric wall & floor mounted lift is available in three versions: the somewhat lower Master Lite for screens up to 120 kilos, the slightly higher Master Select suitable for screens up to 120 kilos and the Master Supreme, which is just as high as the Select but can support screens up to 170 kilos.

Whichever you choose, the Master provides quality and endless possibilities. High-quality materials and a sleek design make this all-rounder suitable for a variety of environments, from a primary school to a university and from a community center to an office.

Available in two versions:
Fine Select & Fine Supreme

For screens up to 100 or 130 kg,
depending on version

Compatible with VESA 200 x 200 mm
tot 600 x 400 mm and
optionally 800 x 400 mm

Virtually silent and invisible

Easy to assemble
in a few minutes

The optionally available support
legs provide additional support for
lightweight construction walls

ErgoFrame Fine

Super flush against the wall

 Electrically adjustable height  Available in grey

For accessories, see page 32.

Fine

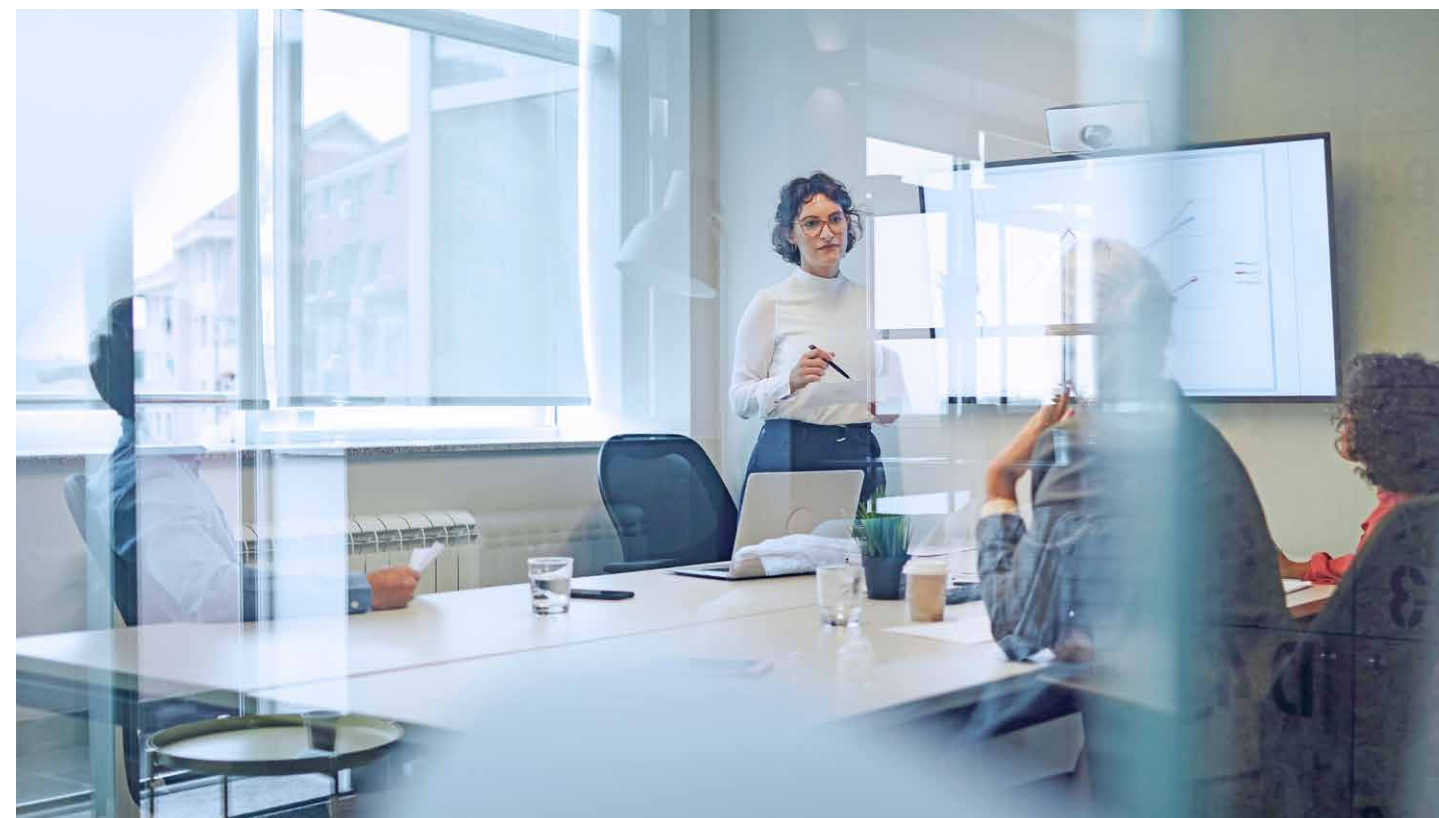

With the ultra-thin ErgoFrame Fine you can hang your screens as flush as possible against the wall.

This fully electric wall lift brings large screens and touchscreens to the correct height virtually silently and with a frame that is a mere 100 millimetres deep. It is available in two versions: the Fine Select for screens up to 100 kilos and the Fine Supreme for screens up to 130 kilos.

We can deliver 14 and 10 at a time, respectively, which keeps the shipping costs relatively low. The Fine is highly suitable for offices, boardrooms, and classrooms.

The system is hidden behind the screen as much as possible making it virtually invisible.

That sure looks fine!

Expandable with
useful accessories

Suitable for
primary education
and business

For flat screens
up to 70 kilograms
and a maximum
of 65 inches

66 centimetre electric
height adjustment

The distance from the center
of the screen to the floor is
continuously adjustable
between 96 and 162 cm

Thanks to the large braked castor
wheels, easy to move and
super manoeuvrable

ErgoFrame Flow

A budget-friendly entry-level model for education

Electrically adjustable height

Available in grey and black

For accessories, see page 32.

Flow

Are you looking for a budget-friendly entry-level model? The dual-column ErgoFrame Flow is a mobile lift designed for flat screens up to 65 inches in size and weighing up to 70 kilos.

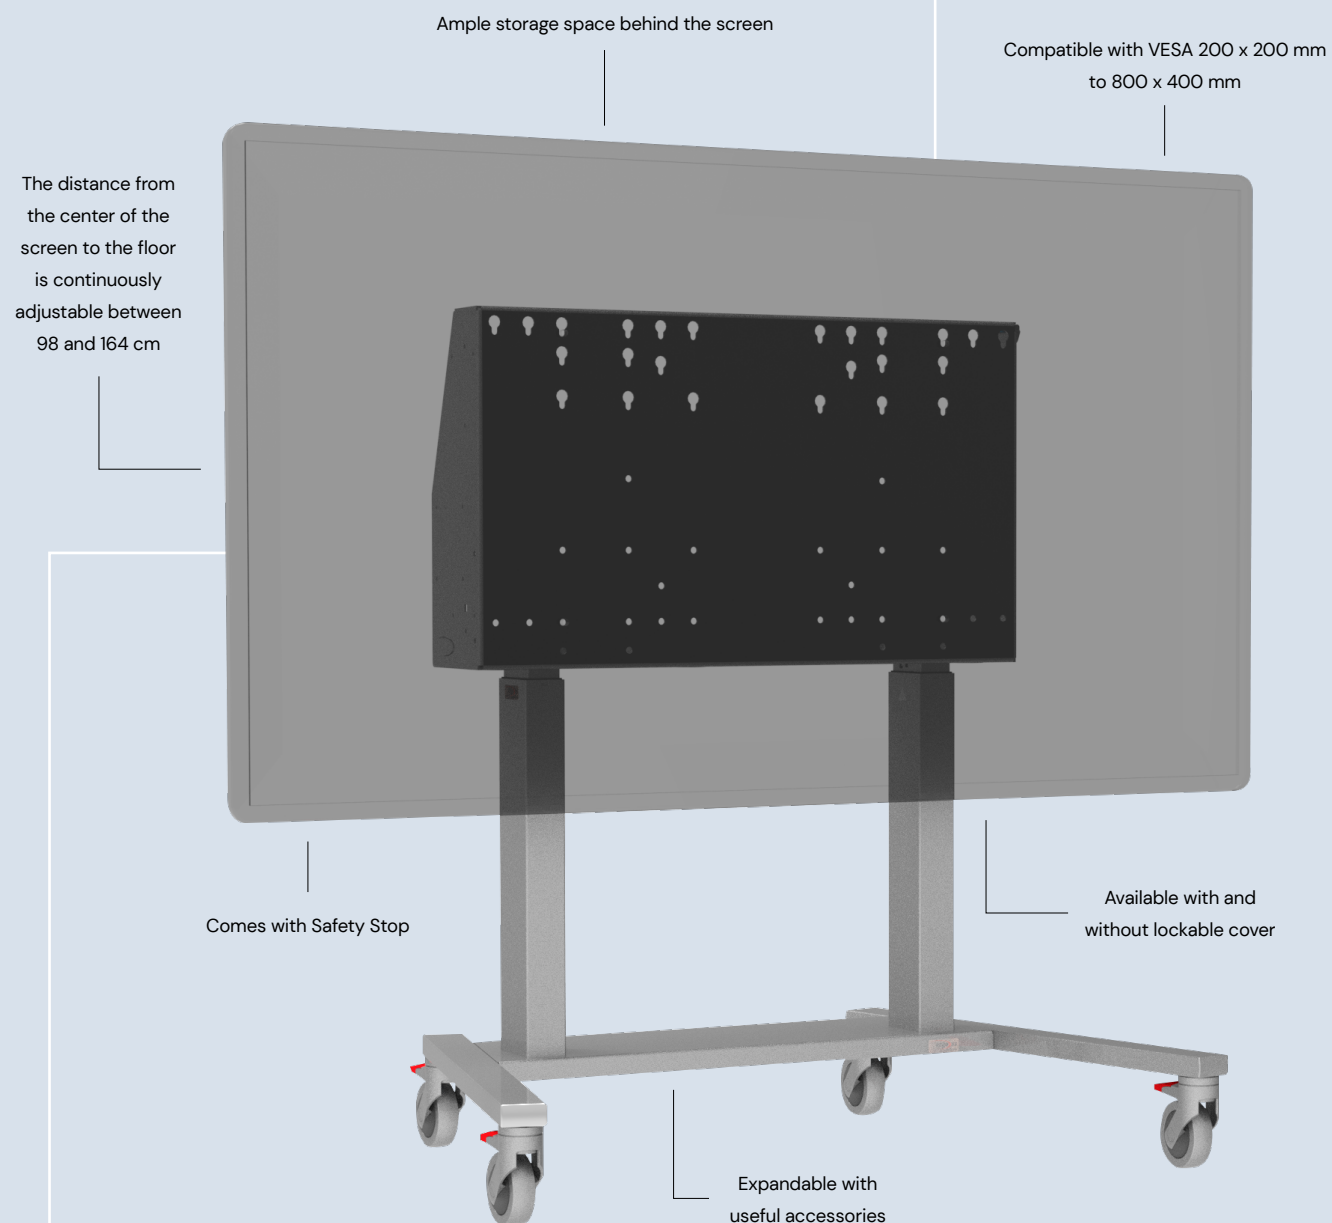

From children to adults, ranging from preschool to boardroom settings, the Flow is suitable for a wide range of work environments.

The trolley is also highly maneuverable and easy to move around. If you need it in another room, simply roll it along with you.

And of course we thought of safety: the built-in Safety Stop automatically switches the system off when it comes into contact with something during height adjustment. All this for a super friendly price.

Safe for children thanks to a Safety Stop. With Safety Stop, the system automatically switches itself off during height adjustment, if it comes into contact with anything.

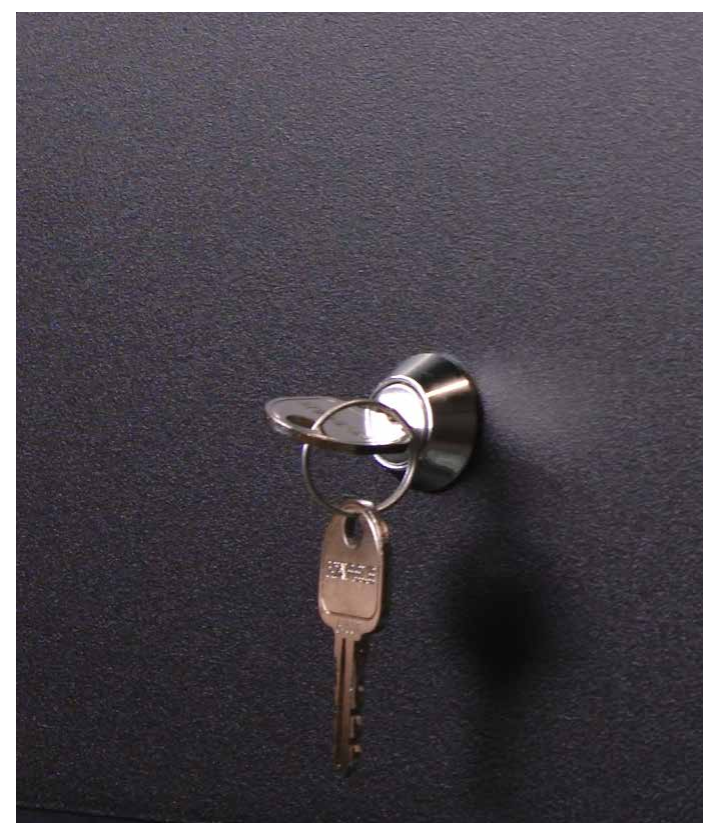

ErgoFrame Motion

Complete, flexible and extremely versatile

 Electrically adjustable height  Available in grey and black

For accessories, see page 32.

Motion

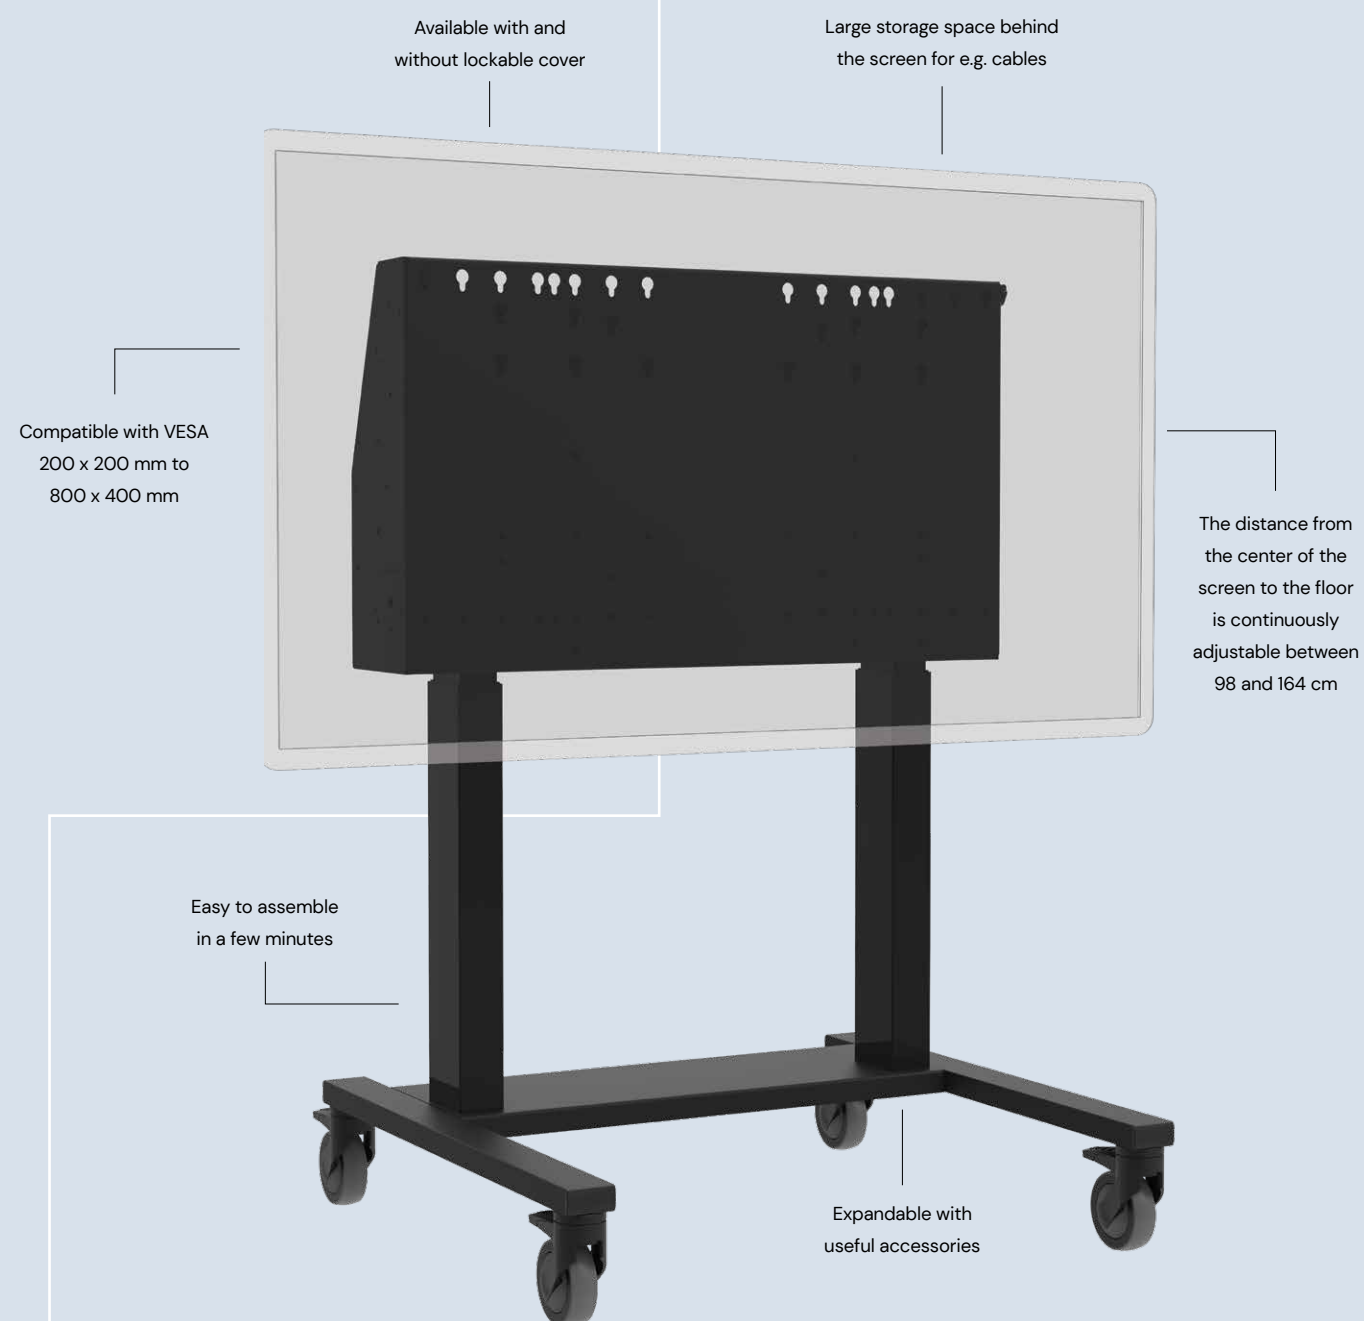

Why do things the hard way when you can choose the ErgoFrame Motion? This robust, electric dual column mobile lift is a real all-rounder that you can use as soon as its delivered: we've already completely assembled it for you.

The Motion is suitable for screens up to 100 kilos and can be raised 66 centimetres from a minimum height of 98 centimetres measured from floor to centre screen. It is equipped with large castor wheels so you can easily move it and a Safety Stop as standard so that it never gets dislocated if it bumps into something when adjusting the height.

Want to safely stow your things away in the Motion? We can assemble a lockable cover on the rear of the Motion where you can store dangling cables. Other accessories include a camera mount, soundbar mounting plate and various laptop shelves. All the bells and whistles to make your presentation go smoothly.

Systems that are right down to the smallest detail: because we won't settle for less. New solutions are conceived, developed, built and tested until they are absolutely right.

ErgoFrame Steady

Budget-friendly all-rounder

 Electrically adjustable height  Available in black

For accessories, see page 32.

Steady

Looking for a strong, all-round electric mobile lift that you can purchase in large numbers? Then you need the Steady: our dual column trolley for screens up to 100 kilos.

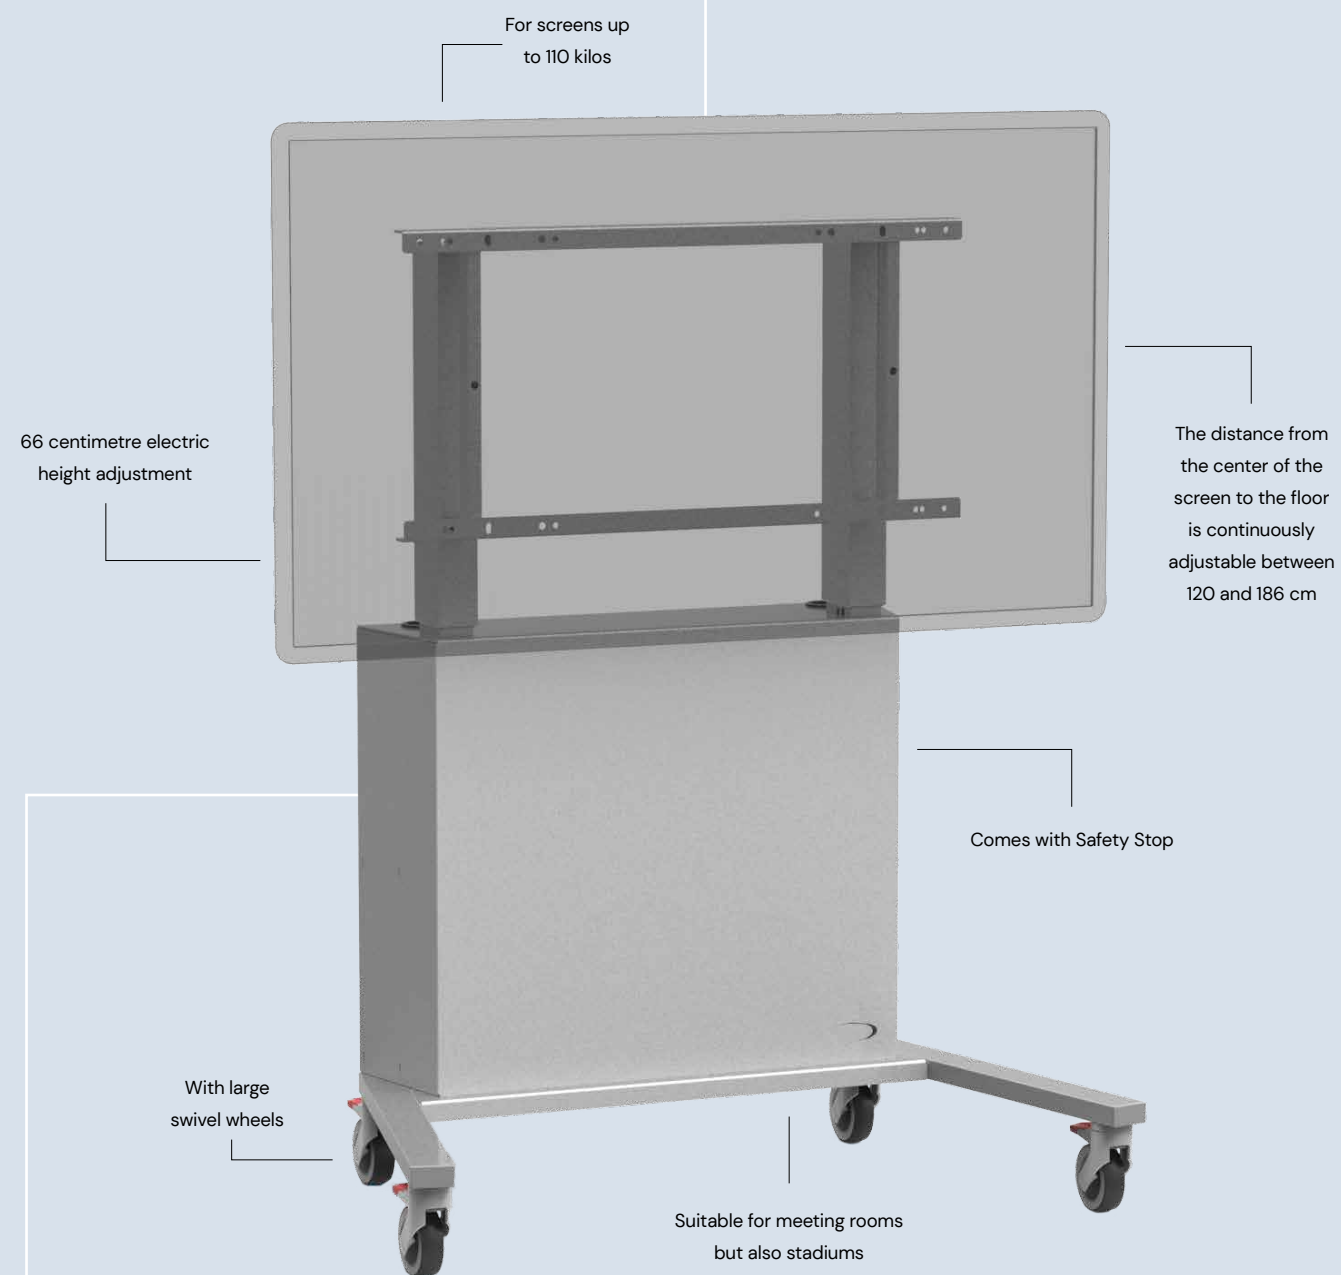

We deliver the Steady in just a few parts, so you can easily assemble it yourself. We can ship up to ten systems on one pallet at a time, keeping transportation and storage costs low.

The Steady is a nice, sleek, black lift system with an adjustment range of 66 centimetres. Easy for primary school children to use, but just as suitable for businesses.

The trolley is also equipped with a Safety Stop, which stops the system automatically when it comes into contact with, for example, a table during height adjustment.

Nice, strong and steady!

ErgoFrame Work

Powerhouse of the trolleys

 Electrically adjustable height  Available in grey and black

For accessories, see page 32.

WORK WORK WORK

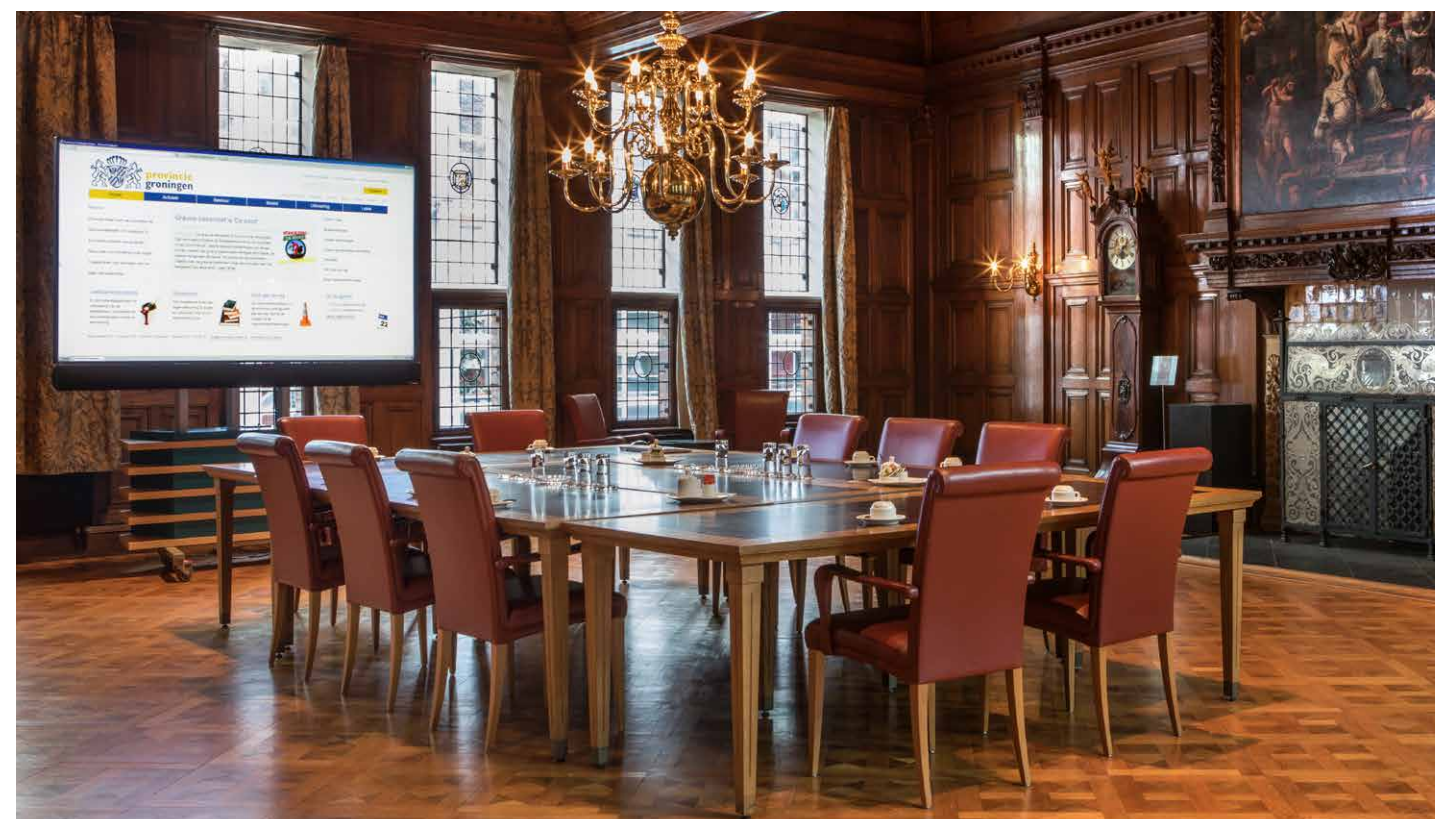

...and take a break!

Work

Where heavy screens are used, it's nice to have a mobile lift that can lift them easily. The dual column ErgoFrame Work Select can!

This large trolley lifts screens up to 110 kilos, is made of high-quality materials and has a minimum height of 120 centimetres. You can adjust it in height 66 centimetres measured from floor to centre screen. To make this heavy powerhouse easy to manoeuvre and move, we equipped it with large, braked castor wheels with a diameter of 100 millimetres.

For safety's sake, the Work Select has a Safety Stop, which stops the system immediately if it comes into contact with something while adjusting the height. Safety always comes first with the ErgoFrame Work Select!

Suitable for screens up to 70 kg
and a maximum of 75 inches

The screen is continuously tiltable
using a lockable gas spring

Broadly applicable, e.g.
as an educational solution
for primary education

The ErgoFrame Twist is a
handy tilting table with
endless possibilities

Easily movable thanks to
large braked swivel wheels

Available in both standard
and lowered versions

ErgoFrame Twist

The super versatile tilting table

 Electrically adjustable height  Available in grey and black

For accessories, see page 32.

Twist

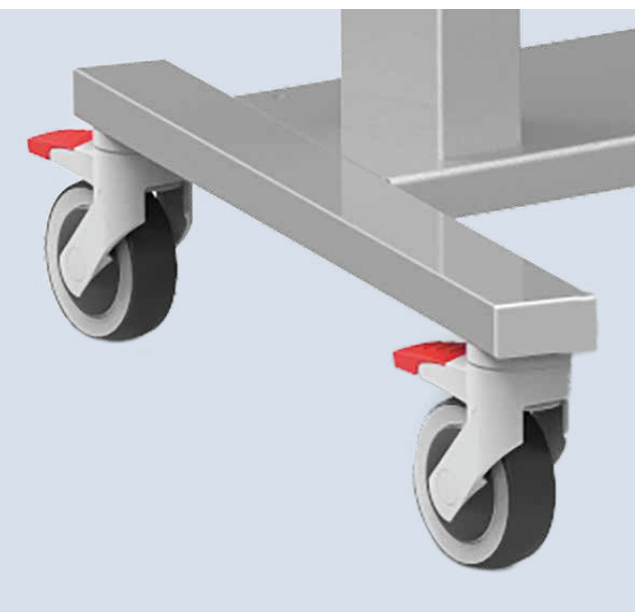

Horizontal. Vertical. Diagonal. You can do it all with the ErgoFrame Twist. You can work with this handy tilting table not only in different positions, but also at different heights. And it's easy to move as well.

The Twist is made of high-quality materials and is ideal for people who work with a touchscreen while sitting. It's also a fantastic educational solution for primary schools. The trolley is suitable for screens weighing up to 70 kilograms and a maximum size of 75 inches and has an adjustment range of 66 centimetres.

The dual column Twist is available in two versions: a standard tilting table that you can adjust from a minimum of 76 to a maximum of 142 centimetres, and a lower version that you can adjust from a minimum of 67 to a maximum of 133 centimetres. Both versions are available in black or grey, and both are equipped with a Safety Stop: when the system comes into contact with something while adjusting the height, it switches off automatically.

In doubt about something? Don't be!
Our advisers will be happy to advise you
on making the right choice.

Adjustable height
mounting frame
for the projector arm

Digiboards from 117 to 155 centimetres
are easily attached to the system

Safety stop is available as
an optional extra

Expandable with
useful accessories
to make the lift system
even more complete

A free-standing solutions on
a floor plate is also possible

ErgoFrame Beam

The electric wall lift for digiboards

Electrically adjustable height

Available in grey

For accessories, see page 32.

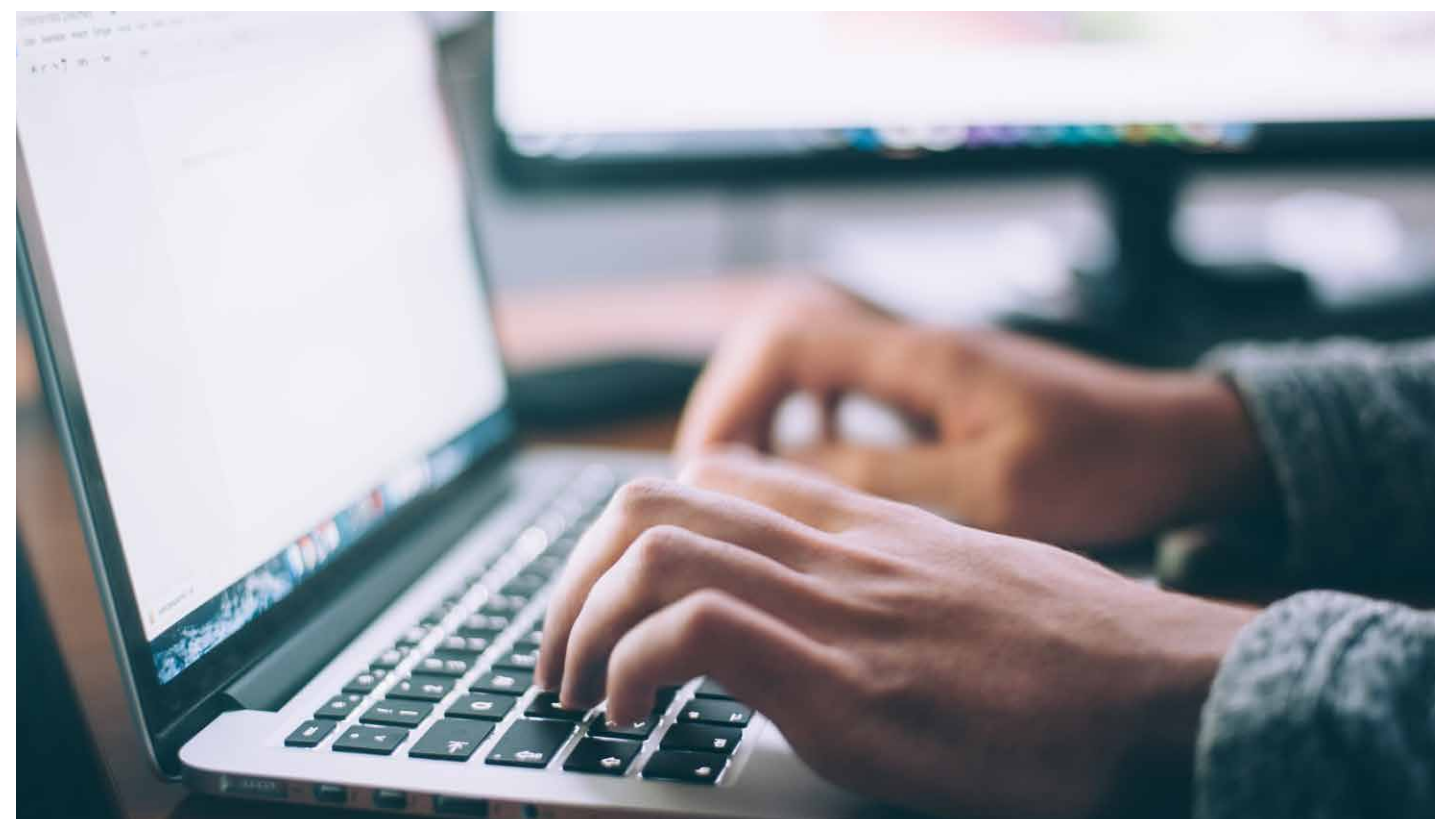

Easy to assemble in
less than 15 minutes!

Beam

Are you looking for an electric lift for a
digital whiteboard combined with a projector?
We have the perfect solution for you:
the ErgoFrame Beam Wall.

The Beam Wall is handy, practical and easy to
use. The Beam Wall is made of steel and has
a universal frame with a system to attach the
whiteboard at it.

You can adjust it in height electrically. The Beam
Wall - if the height of the whiteboard allows it -
is suitable for all projectors with their own
mounting arm and is optional equipped with
a security Safety Stop, which ensures that the
system automatically stops when it bumps
into something during height adjustment.

Slimline

What makes our Slimline products unique? First of all, we package them in a highly efficient manner to keep transport costs low. Secondly, that more VESA screen sizes fit on the Slimline than any other lift system. That they are delivered in a DIY pack. And that they are CE marked; to name just a few reasons. But there is so much more. These lift systems are perfect for export or for tenders in, for example, education. And assembly? All you need is 15 minutes.

The Slimline products are the only mounting system where we supply a mounting plate as standard that you mount on the frame. Not only can you mount our power strips and control panels from external suppliers here: there's also room to neatly stow loose cables away. And whether you want to move the Compact or mount it on the wall: both options are available. The Compact Mobile is equipped with handy, large, braked castor wheels and the Compact Wall, which you mount on the wall, also rests on the floor for extra strength. All this for a super friendly price!

Want to learn more about these products or, for example, delivery? Go to ergoxs.com or contact us directly at phone number +31 594 55 43 00. We'll be happy to help.

Can be shipped per
20 units on a pallet

Slimline Compact

DIY lift systems

 Electrically adjustable height  Available in grey and black

Accessories can be found on the next page

Compact

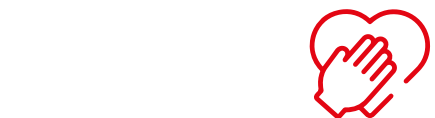

Slimline Compact is an electric dual column lift system that you assemble yourself. It is available in two versions: as a trolley – the Compact Mobile – and as a wall & floor mounted lift – the Compact Wall.

We deliver them as an easy-to-assemble kit, and you can order them per twenty to keep transport costs low. Perfect for export and tenders! And don't worry about assembly: you only need fifteen minutes.

The height of the Compact Mobile can be adjusted 65 centimetres: from a minimum height of 103 centimetres to a maximum height of 168 centimetres measured from floor to centre screen. This makes it perfect for primary education, because even the youngest children can easily use it.

What's more, the Compact is also a great option for offices, hospitals, care homes, etc. The Compact is unique in that it is CE marked and, despite its slim design, it is exceptionally strong: it can support screens up to 100 kg.

A real bodybuilder!

Northern sobriety runs through our blood.
That makes us honest and straightforward.
So with us, you always know where you stand.

Homeline

A little bit different, that's the ErgoXS Homeline. Even though the products are intended for wholesalers and furniture makers, we ultimately see them mainly in private homes. Thus, Homeline!

Homeline systems are very easy to conceal in, for example, a cabinet. For example, the Homeline Trend television lift rises from the cabinet at the touch of a button so you don't have to keep looking at a huge television screen in your bedroom. It appears when you need it and then disappears neatly out of sight.

What is exactly the same as our other product lines is the quality and durability of the products. They are perfectly constructed, made of high-quality materials, last a lifetime and are competitively priced. What more could you ask for?

Want to learn more about these products or, for example, delivery? Go to ergoxs.com or contact us directly at phone number +31 594 55 43 00. We'll be happy to help.

Available in two versions:
Trend Select & Trend Supreme

height adjustment

Homeline Trend

The ultimate entertainment experience

Electrically adjustable height

Available in black

Accessories can be found on the next page

Trend

Practical, smart and designed for the perfect entertainment experience. You can set your television to the perfect height virtually silently with our ErgoFrame Trend TV lift.

The Trend is available in two sleek black versions with a height difference of 30 centimetres: the Trend Select is suitable for screens up to 46 inches and the Trend Supreme for screens up to 65 inches. Both versions support flat screens and touchscreens up to 45 kilos and you can hang your screen at three different heights on both – the Supreme has an additional distance setting.

The Trend is made of high-quality materials and can be used in offices, boardrooms and showrooms as well as in hotels, yachts, campers and private bedrooms.

A real all-rounder!

We supply our lift systems nationally and internationally through selected dealers who meet our quality standards. So you always experience the same ErgoXS service.

Flexline

High-quality, durable, exceptionally cleverly designed mounting systems for an affordable price. That's the ErgoXS Flexline range. They are all systems that can be easily mounted on floors, walls, ceilings or on a combination of these, and then there's also the mobile versions.

From the chassis to the screen sizes, and from the accessories to the mounting options for your screen, the possibilities with our Flexline systems are endless. The Flexline mounting systems offer excellent quality that should not be underestimated. A Flexline product exudes extraordinary style and aesthetics, with a well-thought-out design and made from high-quality materials. Every detail has been constructed with utmost care, resulting in seamless coherence. The end result is simply stunning.

Our Flexline systems are made of an aluminium extrusion profile with space left for built-in components such as a power strip and built-in panels from other suppliers; screen controls, for example. You can divide the open space exactly how you want it and fill the remaining space with a tight, rubber strip. Even loose cables can be neatly stowed away. Accessories such as laptop shelves or camera mount are available as options and easy to install.

During the further development of Flexline systems, we frequently collaborate with companies, as well as universities and hospitals. We customize our Flexline mounting systems entirely based on the preferences of our collaborative partners, in order to achieve the desired solution.

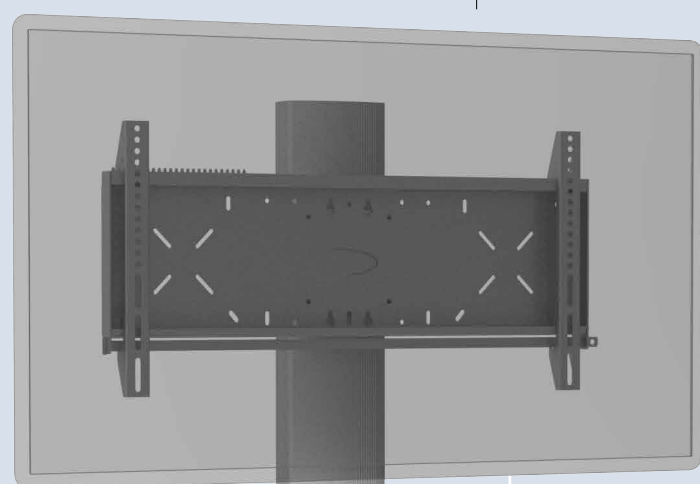

Want to learn more about these products or, for example, delivery? Go to ergoxs.com or contact us directly at phone number +31 594 55 43 00. We'll be happy to help.

Available in three versions:
Stand Lite, Stand Select & Stand Duo

Also in budget variant

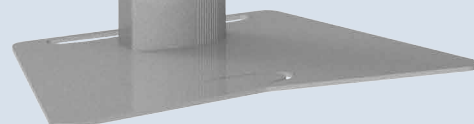

Expandable with a range
of accessories

The height of
the stand is 180 cm

Suitable for incorporating
Biamp, Extron, Gira, Crestron,
among others

All of the cables are
neatly tucked away

Flexline Stand

A floor stand anywhere in the room

Screen can be mounted at any desired height

Available in grey and black

For accessories, see page 56.

Stand

A super strong, aluminium floor stand that you can place anywhere you want. That's the Flexline Stand. The ideal mounting system for webinars and video conferencing with multiple people, for example.

You mount the flatscreens or touchscreens at the desired height on the frame, and you can stow away your own control panels, a power strip, loose cables and, for example, a mini PC connection inside the stand. Neat, practical, professional: because that's exactly how you want it.

The Flexline Stand is available in several versions: the Stand Lite for screens up to 60 kilos and the Stand Select for screens up to 90 kilos. And then there's the Stand Duo for two screens next to each other with a weight of up to 85 kilos and the Budget version for screens up to 50 kilos.

We work with a network of highly qualified dealers all over the world. They are familiar with industry-specific requirements and can therefore think along with you about the best solution for you.

Available in three versions:
Active Lite, Active Select & Active Duo

Compatible with VESA
100 x 100 mm to
800 x 400 mm

Screen can be mounted
at any height

All of the cables are
neatly tucked away

Control panels and connectors
can be mounted in the Flexline

Suitable for incorporating
Crestron, Extron, Gira, Biamp,
among others

Flexline Active

One trolley for every space

Screen can be mounted at any desired height

Available in grey and black

For accessories, see page 56.

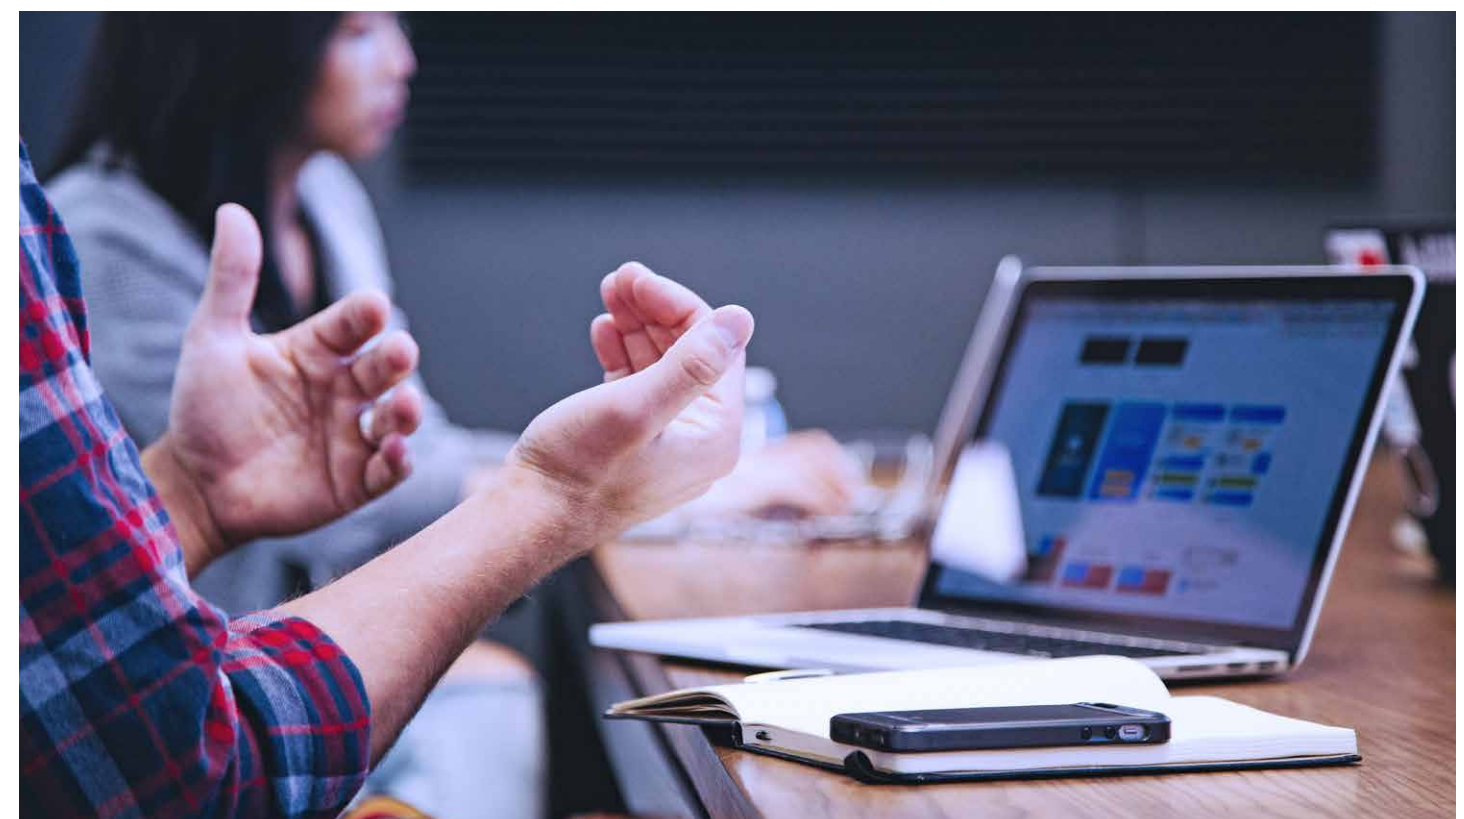

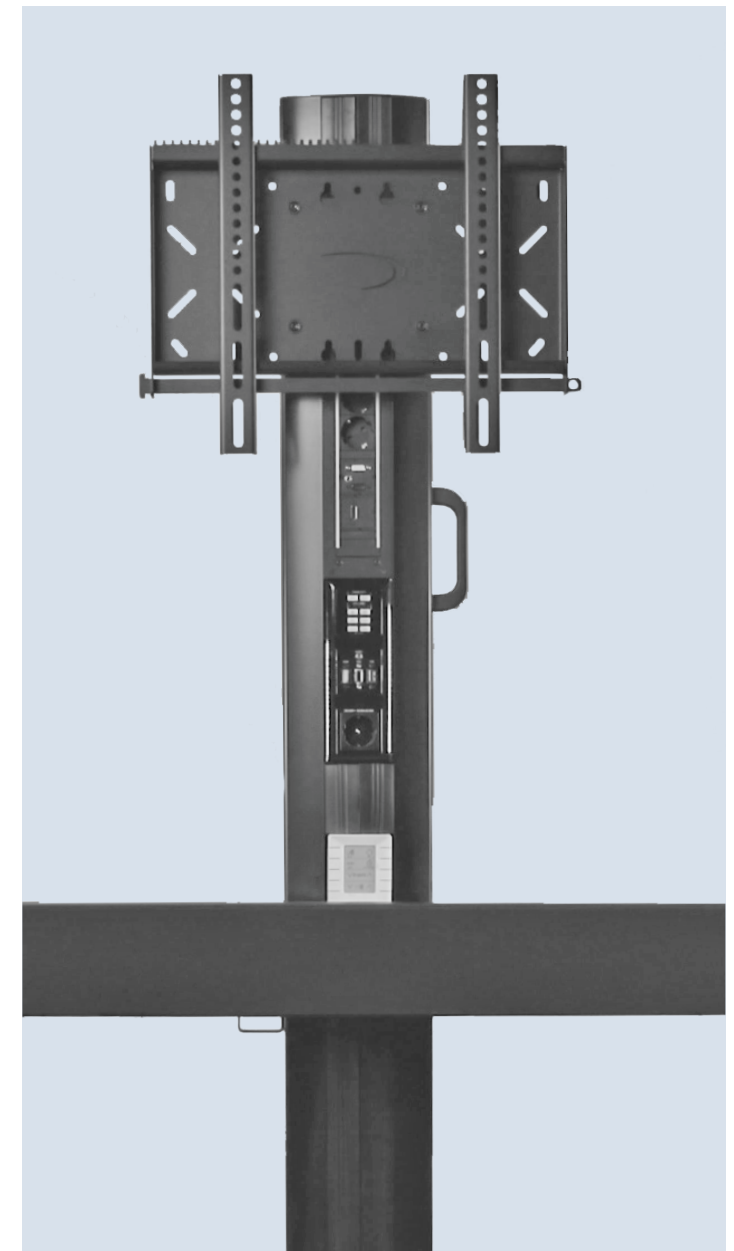

Active

The Flexline Active is a sturdy, aluminium stand that you can move smoothly from one room to another thanks to the solid castor wheels. The ideal trolley for webinars and video conferencing with multiple people.

In addition to the Active Lite for a screen up to 60 kilos and the Active Select for a screen up to 90 kilos, we also have the Active Duo, which can support two screens with a combined weight of up to 85 kilos. And we even have a Budget version: it's affordably priced suitable for a select number of screen sizes up to 50 kilos and you can tilt the screen forward 12 degrees for the ideal viewing angle.

All versions are available in black and grey and have a maximum height of 1 metre 94. Loose cables? Stow them away neatly in the stand along with your own control panels and, for example, a power strip. Super sleek, professional and affordably priced to boot.

Stay active!

Suitable for flatscreens and
touchscreens up to 90 kilos

Available in various versions
including a Budget or Duo variant

Control panels and connectors can
be mounted in the Flexline

Expandable with a
range of accessories

All of the cables are
neatly tucked away

Suitable for incorporating
Biamp, Extron, Gira, Crestron,
among others

Flexline Lean

A stand for on the wall or on the floor

Screen can be mounted at any desired height

Available in grey and black

For accessories, see page 56.

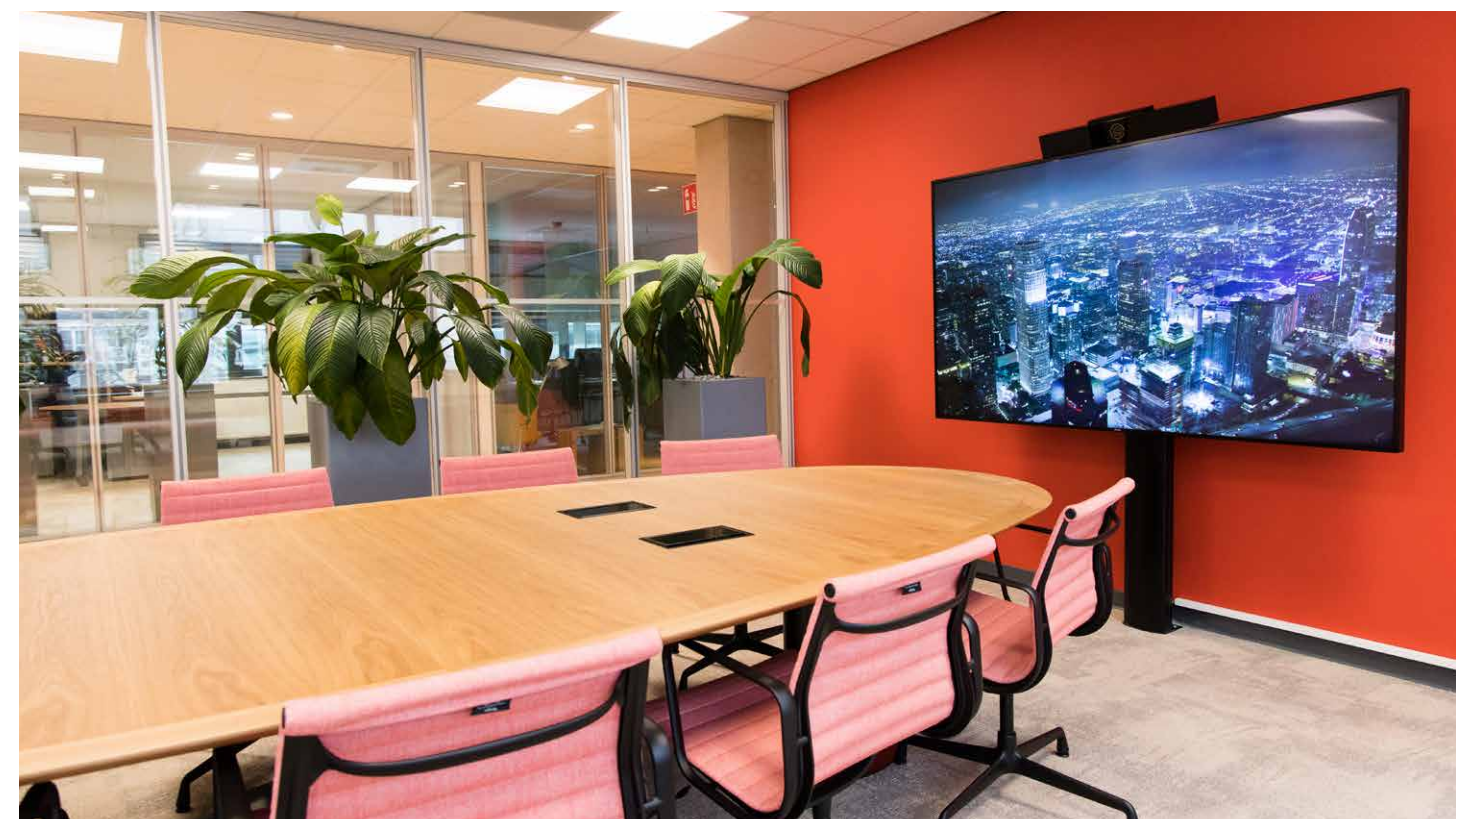

Lean

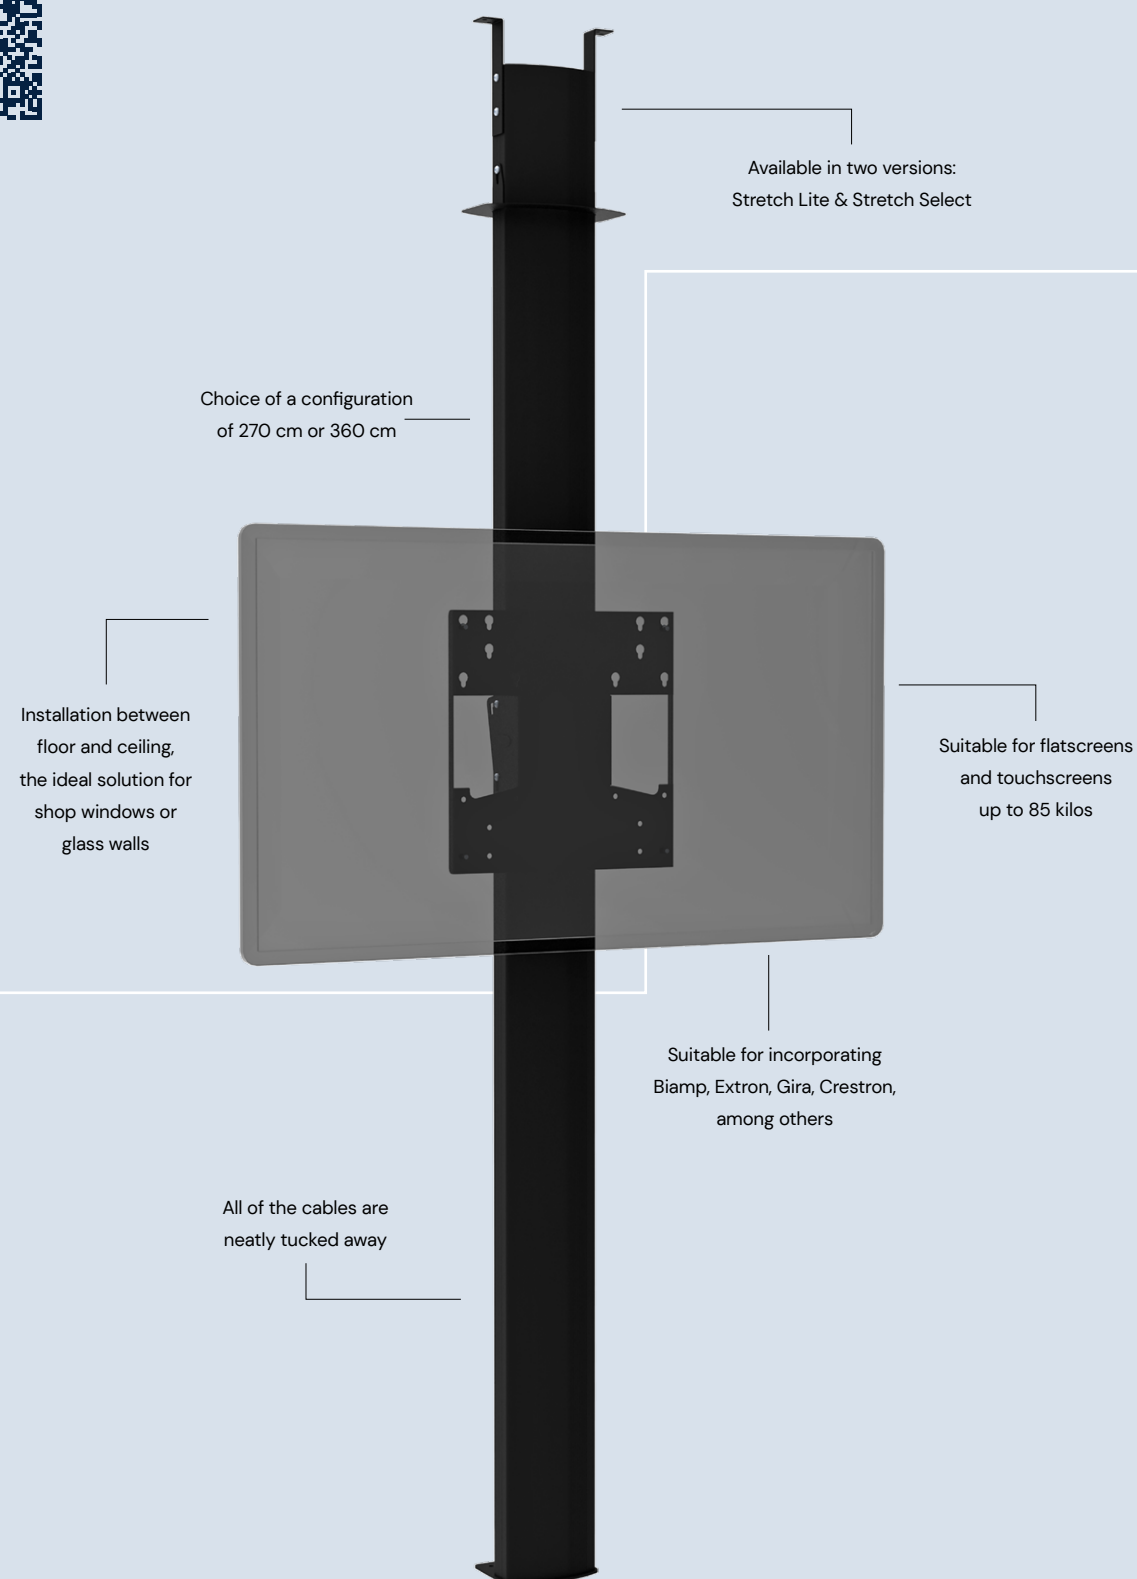

Mount the Flexline Lean on the wall and the floor. This super professional stand is made of high-quality materials, is 1 metre 80 high and you can mount the screens on the frame at your preferred height.

Because in addition to the Lean Lite that can support a screen with a weight of up to 90 kilos, we also have a Duo version. You can mount two screens with a combined weight of up to 85 kilos on the Duo.

And whether you choose a chic, grey Lean or the business black version, they're both equally neat and professional. Both have space in the column for your own control panel, a power strip and loose cables.

And last but not least, we also have a Budget version that's suitable for flatscreens and touchscreens up to a maximum of 50 kilos. The screen can be tilted 12 degrees and is affordably priced. It's up to you!

Flexline Stretch

The ceiling & floor stand that's solid as a rock

↑↓ Screen can be mounted at any desired height Available in grey and black

For accessories, see page 56.

Stretch

Large rooms need a Flexline Stretch. The mounting system that can handle a real heavyweight screen. The Stretch is an aluminium ceiling & floor stand that can literally be stretched from floor to ceiling.

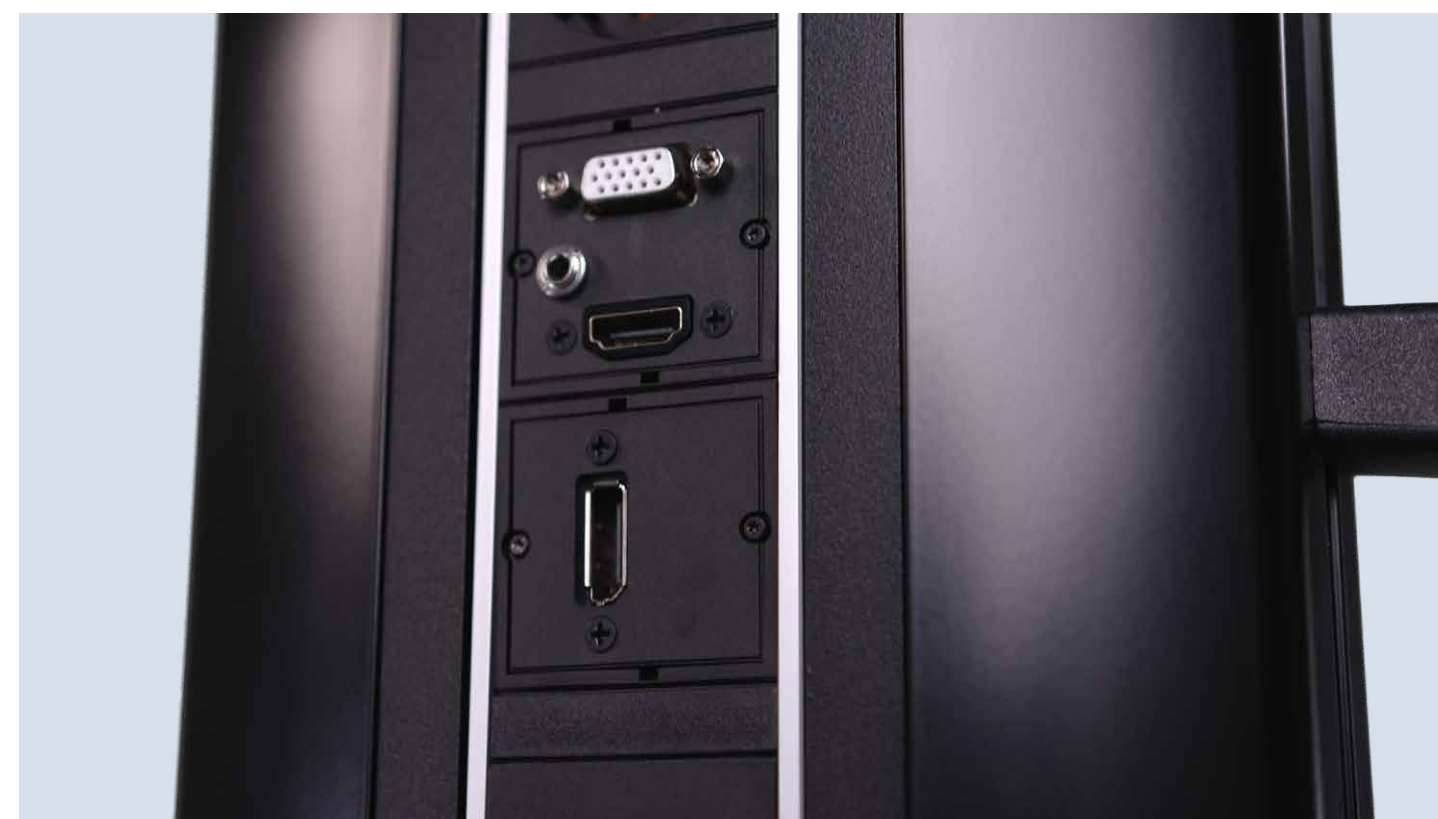

This product is the perfect solution when a screen cannot be wall-mounted, such as in shop windows or glass partitions in office buildings. The Flexline Stretch is available in two versions, both suitable for screens up to 85 kilos: the Stretch Lite for rooms with a height of up to 2 metres 70 and the Stretch Select for rooms with a height of up to 3 metres 60.

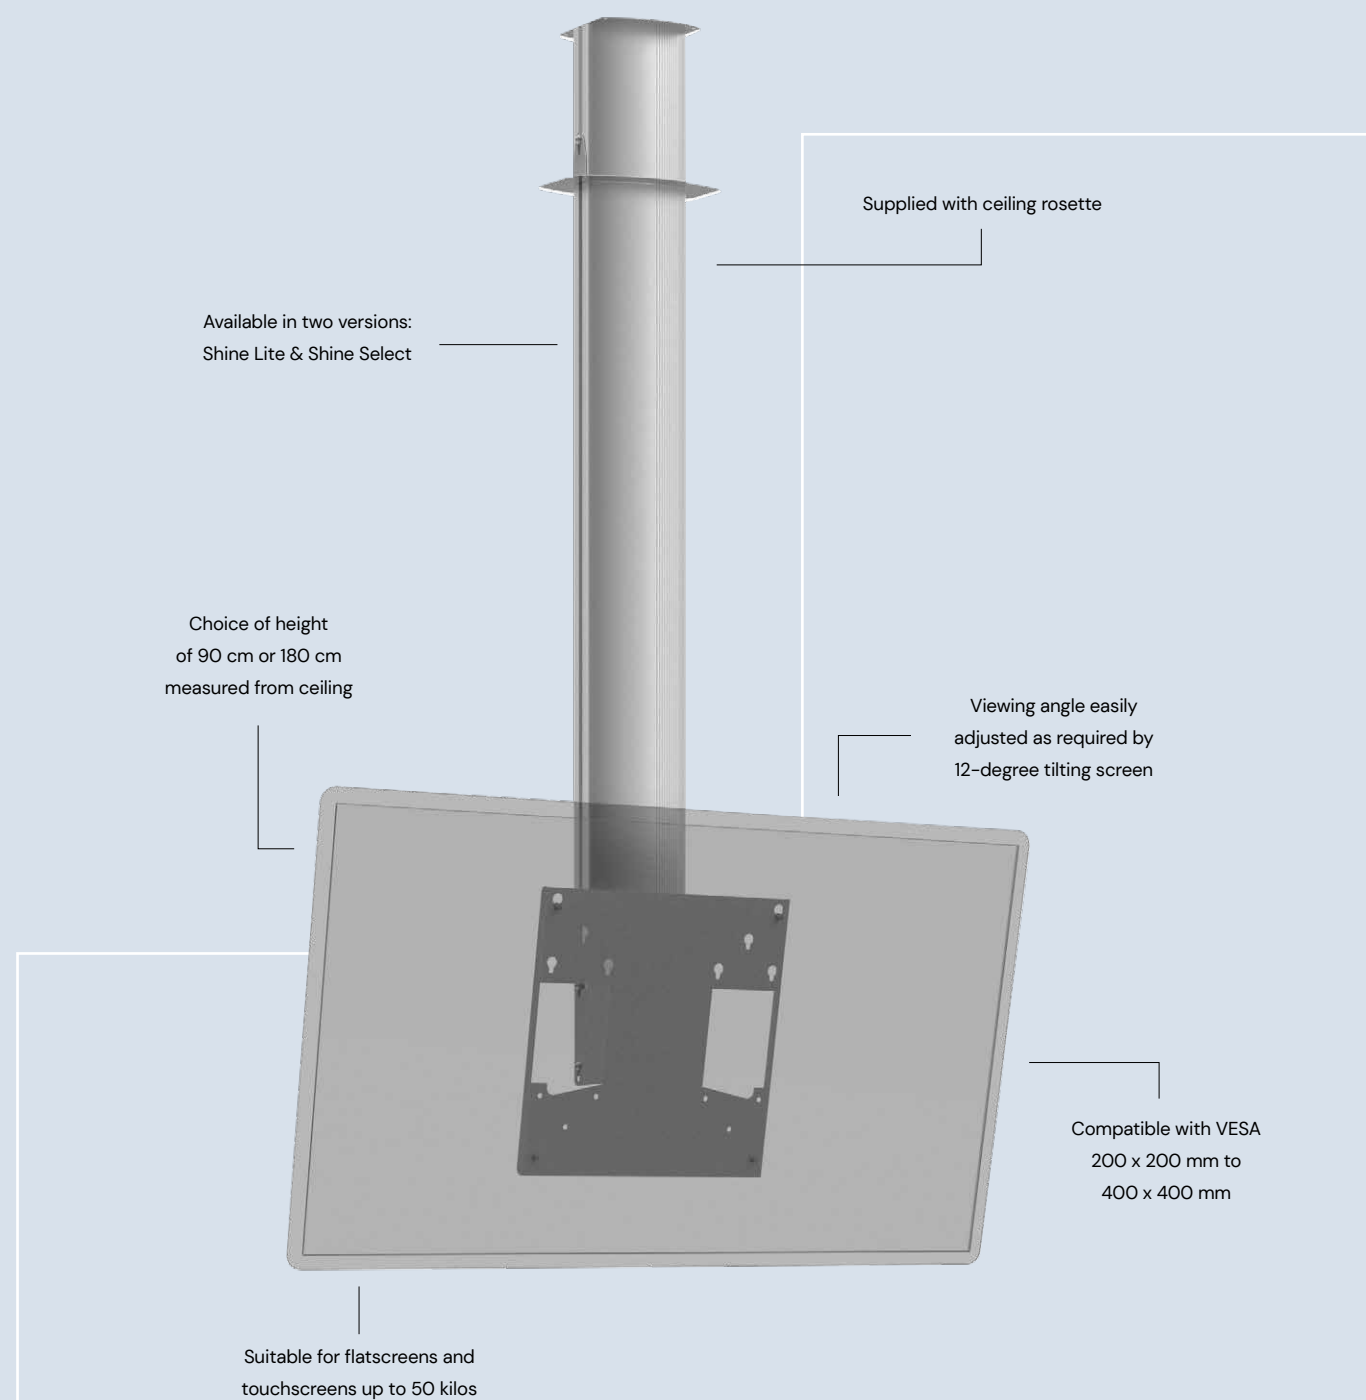

And there is also a Budget version. Super sleek, super strong, super professional.

That's the Stretch.

your limits.**

Flexline Shine

The perfect ceiling mount

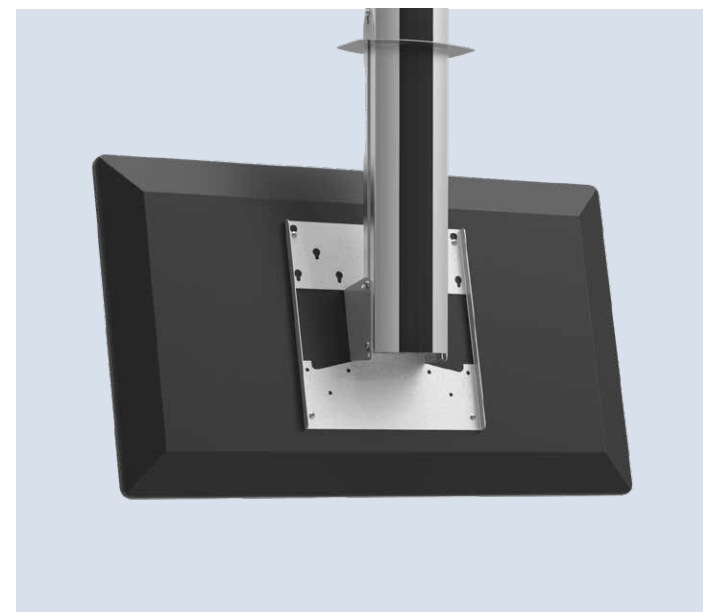

Screen can be mounted at any desired height

Available in grey and black

For accessories, see page 56.

**Time
to shine**

Shine

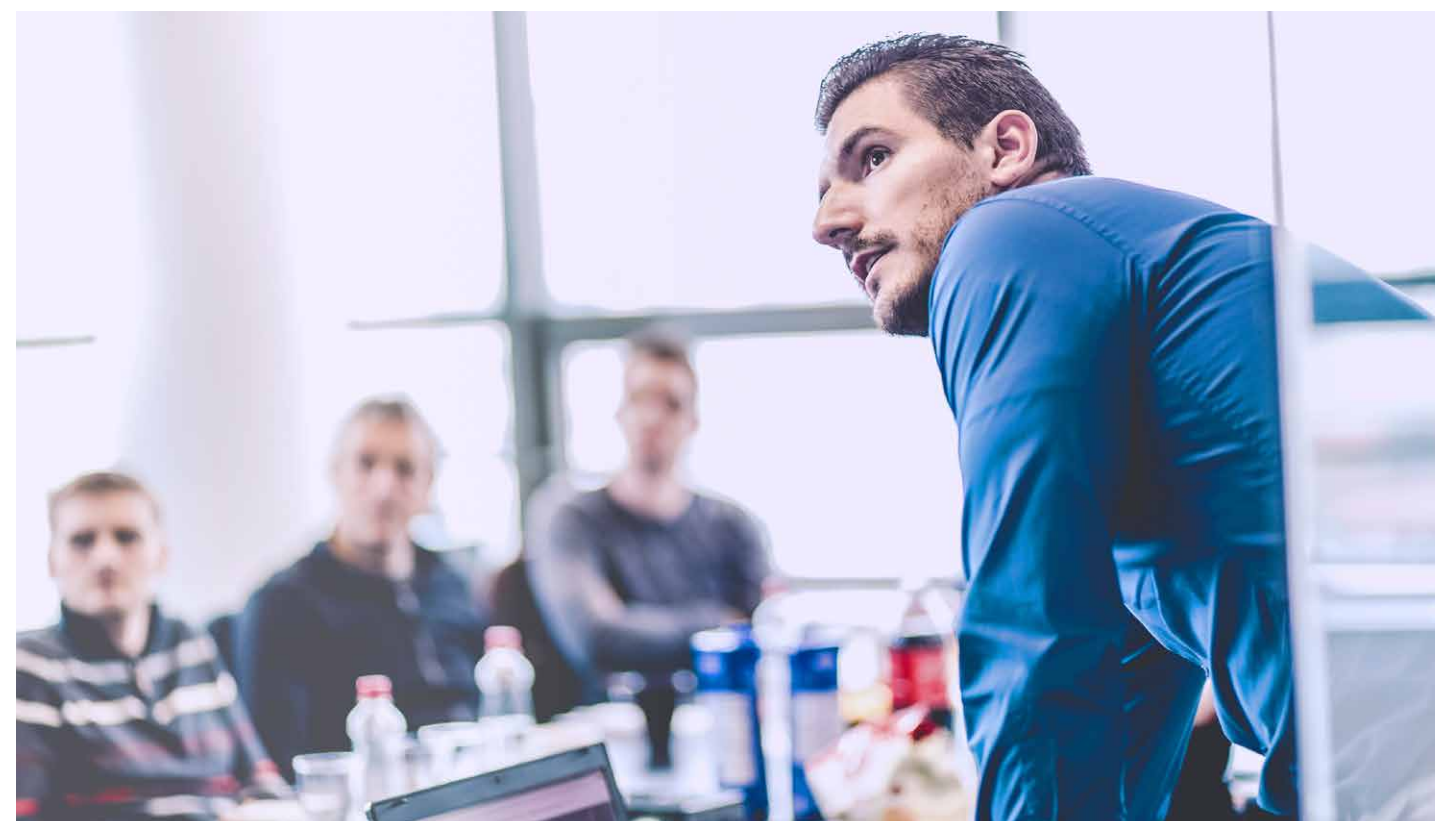

Want to hang a touchscreen or flatscreen in a room without being dependent on the décor? Then you're looking for a Flexline Shine ceiling mount.

The Shine Lite, for example, with a height of 90 centimetres from the ceiling to the centre of the VESA mounting bracket. Or the Shine Select that's double the length.

You can attach the Flexline Shine to the ceiling at any desired location and conceal loose cables in the column. And it's super easy to set up, looks very professional and is very affordable. Pretty nifty, right?

The Shine is available in grey and black and all versions can lift screens up to 50 kilos and 90 centimetres. And because the Shine is part of our Budget range, you can tilt the screen 12 degrees forward for the ideal viewing angle.

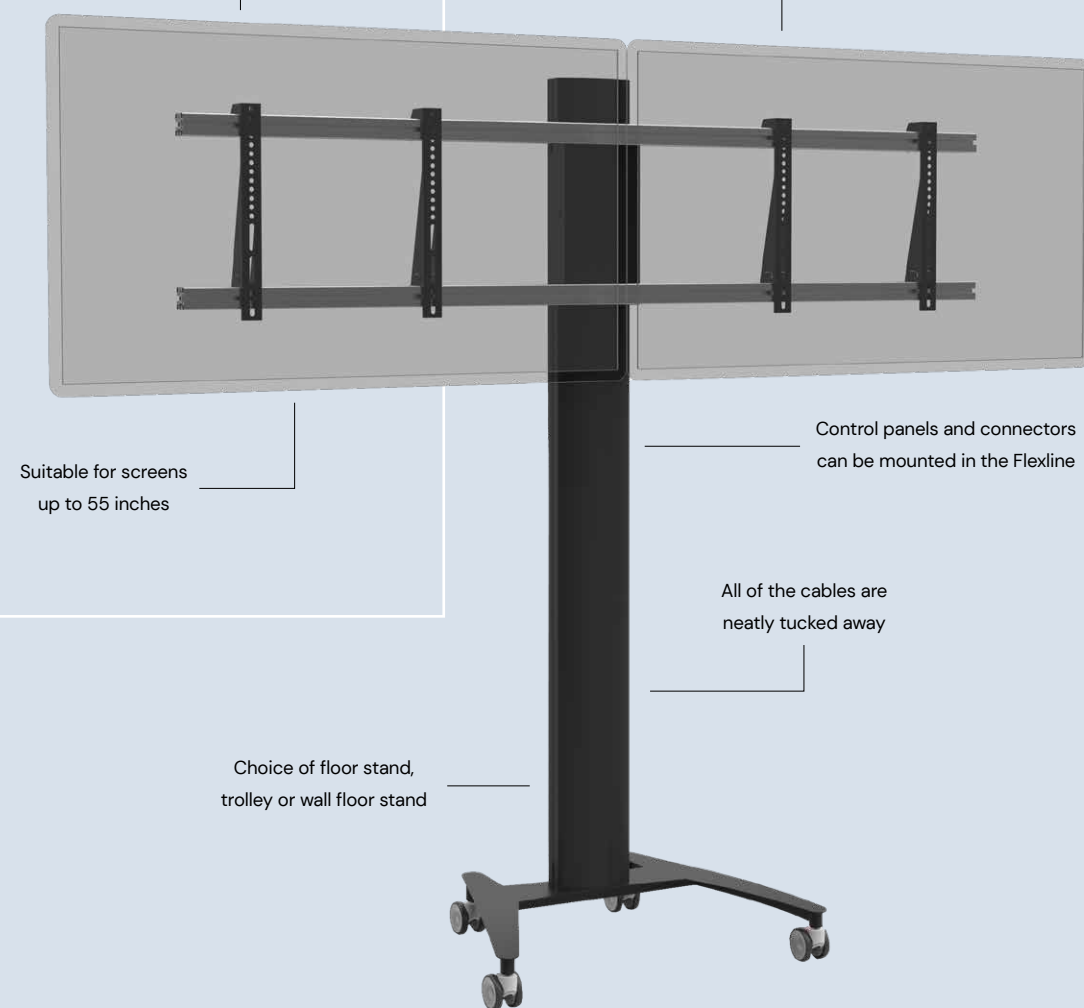

The Shine, really worth considering.

Compatible with VESA
100 x 100 mm to
600 x 400 mm

Available in three versions:
Active Duo, Stand Duo & Lean Duo

Flexline Duo

One stand for two screens

 Screen can be mounted at any desired height  Available in grey and black

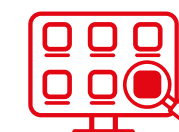

For accessories, see page 56.

Duo

Sometimes, one screen is not enough. For example, on exhibition floors, in shops, during webinars or videoconferences with several people. That's why we have developed Duos.

Three stands of three mounting systems from our Flexline series, all of which can easily carry two touch screens or flat screens. The Active Duo is portable, the Lean Duo is a wall floor stand and the Stand Duo can be easily mounted on a floor plate before placing the stand anywhere on the floor.

The Duos are the double versions of the standard single versions of the Active, Lean and Stand stands and carry the displays side by side.
